

VAERS Results

Age	Events Reported	Percent (of 4,483)
< 6 months	2,305	51.42%
6-11 months	695	15.50%
1-2 years	782	17.44%
3-5 years	589	13.14%
6-17 years	53	1.18%
18-29 years	5	0.11%
30-39 years	6	0.13%
40-49 years	1	0.02%
50-59 years	3	0.07%
60-64 years	1	0.02%
Unknown	43	0.96%
Total	4,483	100.00%

Notes:

Caveats: Some items may have more than 1 occurrence in any single event report, such as Symptoms, Vaccine Products, Manufacturers and Event Categories. If data are grouped by any of these items, then the number in the Events Reported column may exceed the total number of unique events. If percentages are shown, then the associated percentage of total unique event reports will exceed 100% in such cases. For example, the number of Symptoms mentioned is likely to exceed the number of events reported, because many reports include more than 1 Symptom. When more than 1 Symptom occurs in a single report, then the percentage of Symptoms to unique events is more than 100%. [More information.](#)

Data contains VAERS reports processed as of 11/30/2010. The VAERS data in WONDER are updated monthly, yet the VAERS system receives continuous updates including revisions and new reports for preceding time periods. [More information.](#)

DISCLAIMER: Please note that VAERS staff follow-up on all serious and other selected adverse event reports to obtain additional medical, laboratory, and/or autopsy records to help understand the concern raised. However, in general coding terms in VAERS do not change based on the information received during the follow-up process. VAERS data on WONDER should be used with caution as numbers and conditions do not reflect data collected during follow-up. Note that the inclusion of events in VAERS data does not infer causality. Review cautions in the interpretation of this data: [More information.](#)

Help: See [VAERS Documentation](#) for more information.
